

ENVIRONMENTAL AND WASTE MANAGEMENT POLICY

Park Elektrik has defined and implemented an environmental policy for a sustainable and future open to development, which includes the process of improvement, protection and development of all the values that make up the environment of present and future generations in all areas (environmental, social, economic, physical, etc.), without jeopardizing the existence and quality of the resources that future generations will need in all types of production.

In this context;

- To take the necessary measures to minimize our negative impact on the environment in all our activities, within the framework of national and international legislation, in accordance with the principles established by our Constitution,
- To carry out activities to fulfill all obligations under the Turkish Environmental Legislation in order to ensure environmentally compatible management and to prevent the deterioration of the ecological balance,
- To ensure that the necessary training, awareness and development activities are meticulously carried out in compliance with all environmental laws and regulations,
- To minimize the negative impact on the environment and prevent accidents by using the most environment friendly technologies possible, beyond the legal requirements,
- To plan and implement precautions to minimize negative environmental impacts in the event of accidents or emergencies that may occur during our operations,
- To regularly monitor and work to reduce our greenhouse gas emissions in order to combat climate change,
- To regularly monitor and work to reduce our use of natural resources, especially water consumption.
- To carry out activities to reduce air emissions, water pollution and waste water, and to protect and develop biodiversity in the areas where we operate, in order to protect natural life and the environment,
- To control the environmental impact of our waste, reduce or recover it at source, and dispose of our waste that cannot be recovered without harming the environment,
- To prevent pollution and continuously improve environmental performance by following scientific research and technological developments,
- To implement the necessary activities to create and develop environmental awareness among our employees in order to achieve our environmental goals,
- To increase the environmental awareness of all our employees, including senior management, by providing environmental training to all employees in our company,

are the basic principles of our environmental policy.

Our company, which accepts the issue of the best evaluation of an environmental management system as a regulatory framework that is continuously monitored and periodically reviewed in order to effectively guide environmental management in terms of responses to changing internal and external factors, has adopted as one of its main philosophies the protection of human health, the protection and improvement of all elements and resources that directly determine the quality of life, such as water, air, soil, climate, environment, natural / cultural heritage, flora and fauna.
